Subject: Re: How to handle child windows
Posted by michael on Mon, 28 May 2007 11:08:26 GMT

What i want to do is to open a new TopWindow which is placed in relation to my mainWindow.

e.g. my mainWindow is placed like this:

SetRect(300, 300, 500, 500);
Then i want to get the position of my mainWindow and place my childWindow e.g. like shown above.

I tried to get the info from the manual etc. but didn't get it right now.
