Thanks Tomas,

Your brief description will do, i look into the code and learn what the functionality of each class is.

My only problem at this moment is that not all the components of the geom package will build (on linux), i did a standaard install of version 2007.1.

Do you know where i can find the missing files?
Or do i need to set extra dependencies, i found out that the missing class RefBase is in utils.h in the web package.

Greetings,
Gertwin
