thx ped for the answer..!

Lol i think it is a mess..i'm not so experienced as programmer..but i learn quickly.

Anyway ..I have understood that headers compiles the '.o' files..

and further '.o' files are linked to '.so' (libraries) if i'm not wrong..

So I need to create packages in UPP from '.so' files (3D API) and dependencies...

But when I go to create a package, why UPP ask to me for files like .cpp or .h ,and not '.so' or a library folder atleast ?

I'm a bit confused..lol
