You cannot instantiate a abstract class directly.

To use PlotterCtrl you have to derive a class from it and override the abstract member(s).

In PlotterCtrl you have to provide an implementation for "void Plot(Plotter& plotter)" wich i think paints the picture.

How did you manage to build the geom package, do you use a recent svn checkout?

I use the 2007.1 release on linux, but this is missing dependencies to build the geom package.
