I'm using recent svn checkout (revision 60) under winXp on msvc 2005 express.

I've derived my class MyPlot from PlotterCtrl, where i implement Plot().

But running MyPlot i never pass in MyPlot::Plot, but i pass in virtual PlotterCtrl::Plot;

In the constructor of MyPlot i'm initializing using

```
FrameLayout(Rect(0, 0, 700, 700));
```

Do you think that MyPlot::Plot need to be spell using this form :

```
ImageDraw& im = BeginBufferPaint();
```

```
Plot( Plotter(
```

```
  im,
```

```
  polygonVectBox,
```

```
  Rect(0, 0, 500, 500)));
```

```
EndBufferPaint();
```
