pap2k wrote on Tue, 05 June 2007 09:20 I'm using recent svn checkout (revision 60) under winXp on msvc 2005 express.

I tried revision 60 from svn but it won't compile on linux.
Looks like not many people are using the geom package on linux.

pap2k wrote on Tue, 05 June 2007 09:20 I've derived my class MyPlot from PlotterCtrl, where i implement Plot().

But running MyPlot i never pass in MyPlot::Plot, but i pass in virtual PlotterCtrl::Plot;

In the constructor of MyPlot i'm initializing using

```
FrameLayout(Rect(0, 0, 700, 700));
```

Do you think that MyPlot::Plot need to be spell using this form :

```
ImageDraw& im = BeginBufferPaint();
```

```
Plot( Plotter(  
    im,  
    polygonVectBox,  
    Rect(0, 0, 500, 500)));  
EndBufferPaint();
```

I think you didn't make your Plot member virtual.
Maybe i try it on windows and see if i get it to work.
