The good news:
We are looking for some good U++ developers! We are developing all our new (and relaunch some of our older) applications in U++, because most of them need to run on Windows and Linux.

So we do many stuff with database (MySQL, PostgreSQL), serial, parallel and ip-communication and much more. We create touch screen solutions, end user clients (outlook like gui) or sometimes "only" high performace services for background processing.

(Maybe) the bad news:
You have to work in Vienna, Austria. Project languages are german or english.

We hope, there is anybody outside there, who want to join us.

If you are interested, please send me a PM or Mail - I will reply soon.

Thanks in advance,

kind regards
