Subject: Told TheIDE where to find library, but TheIDE states, No such file or directory....

Hi Guys,

I wanted a "common" library for some programs in the "MyApps" folder, so I created the directory, "common" in "MyApps".

In there I placed two files named, "GUILib.h" and "GUILip.cpp".

Next, in the lower left hand corner of TheIDE, where an app's files are listed, with a right click and selecting, "Special > Insert any File(s)", both files, "GUILib.h" and "GUILip.cpp" with prefixed absolute paths were added.

```
#include <Core/Core.h>
#include "GLib.h;

using namespace Upp;

CONSOLE_APP_MAIN
{
 GLib moo;
}
```

Upon compiling, a "fatal error: GLib.h: No such file or directory" message lists.

If I comment out the line with the include, "error: 'GLib' was no declared in this scope" message listed.

If having added the library files by way of, "Special > Insert any File(s)", why isn't the library file recognized?

Peter
