Are those empty lines produced in "Preview" from *.upt (I guess Esc "returns") a bug?

That empty lines forced me to making "ugly" upt files. I had to merge lines into one to avoid producing empty lines. Can you add it to todo list (to not forget)?

OK.

However, if I remember well, the real trouble is to define "correct-line-end" - to define which line endings should be excluded. This is what prevented me to do it last time....

Maybe then it's better to have that evaluate function and by loading code from other files into templates both problems will be solved?

I've found a workaround for this. I create the first section @@notes.txt for all my template code data and functions. Then I use only the required outputs into appropriate files.
