I am planing to develop on a Red Hat 6 machine and the compiler on this is the gcc 4.4.6. Because this compiler is not supported in the current release I want to ask if there is an old release supporting gcc 4.4?

So, running "make" of upp version 4179 on the redhat 6 machine with gcc 4.4.6 i get the following error:

In file included from /usr/include/glib-2.0/glib/gasyncqueue.h:34,
from /usr/include/glib-2.0/glib.h:34,
from CtrlLib/TrayIconX11.cpp:8:

```
/usr/include/glib-2.0/glib/gthread.h:347: error: size of array is negative
gmake[1]: *** [_out/CtrlLib/GCCMK-Gcc-Gui-Linux-Posix-Shared/TrayIconX11.o] Error 1
gmake[1]: Leaving directory `/home/danielh/upp-x11-src-4179/uppsrc'
cp: cannot stat `uppsrc/ide.out': No such file or directory
make: *** [all] Error 1
```

Any idea why this is thrown? Also tried it with version 2361 -> same error.

I tried it with the 2015.2 release (version 9251):

cp: cannot stat 'uppsrc/ide.out': No such file or directory

I checked the folder and there is no ide.out so thats correct. But there is a umk.out so sth went wrong compiling TheIDE.

Any ideas? Or did someone face this problem already?

So I found an error message inside the output of the make routine:

```
/usr/lib/gcc/x86_64-redhat-linux/4.4.6/../../../../lib64/libgdk-x11-2.0.so: undefined reference to  
`_XGetRequest'  
collect2: ld returned 1 exit status
```

And there is a lot of "skipping incompatible..." stuff as well.
Can anyone pls help me??
