I want to continue development of my old UPP projects.
I used Git to store the local copy of UPP svn repo and my local modifications.
Currently the old SVN mirror (http://upp-mirror.googlecode.com/svn/) seems to be dead.
Is there a way for me to get access to an SVN repo of UPP?

Hello,

If you want to have access to U++ SVN please read following site - https://www.ultimatepp.org/www$uppweb$svnInstall$en-us.html.

Alternatively, you could use git mirror from Github. I believe this is better solution if you don't want to commit anything to U++. To clone repository, just execute following command in your terminal:

git clone https://github.com/ultimatepp/mirror.git

The git mirror is synchronized with SVN, so it is absolutely up to date. The delay between commit to SVN and GIT mirror takes around one minute or even less.

Sincerely,
Klugier

Git mirror will be OK for me.
Thank you.
