Subject: U++ TheIDE: CodeEditor, Assist++, Topic++ page not working correct

When I wanted to open my new post on this forum page (U++ TheIDE: CodeEditor, Assist++, Topic++) I had some strange behaviour:

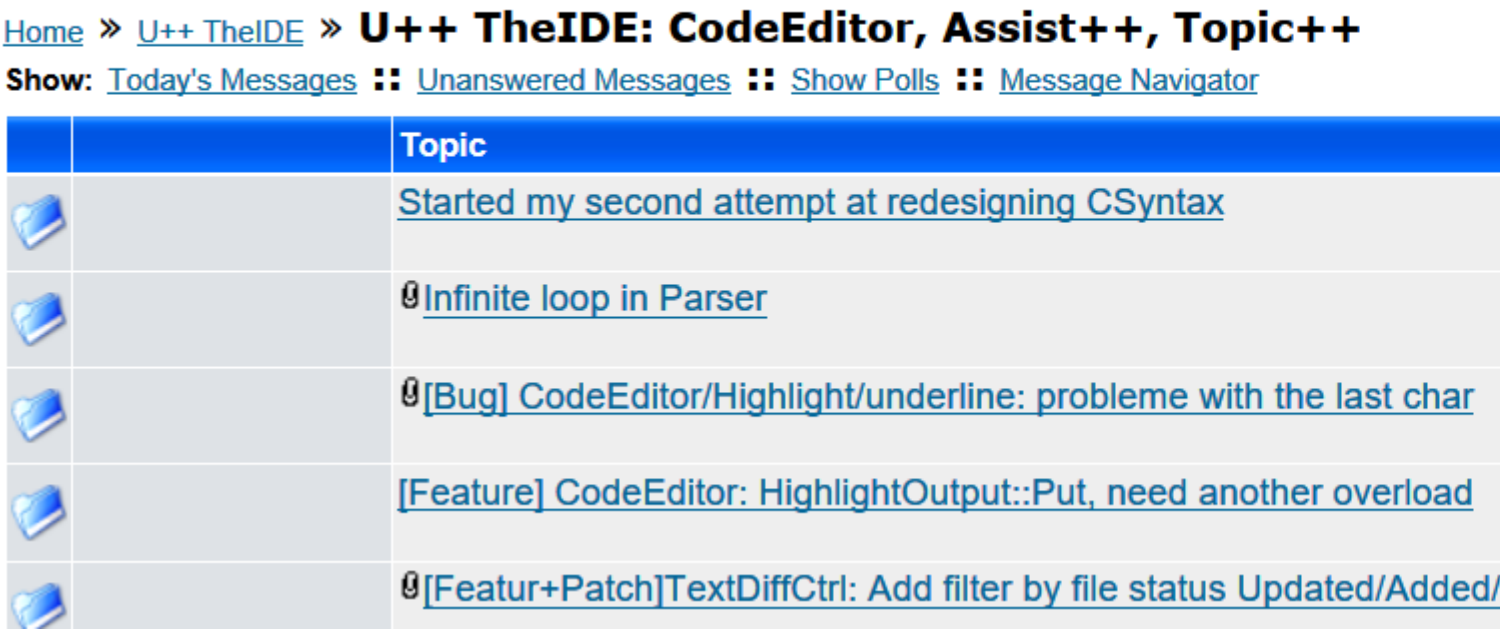

1. My post is not shown
2. I am not logged in anymore

To 1st:
The post exists, I checked that. It is shown in my own posts and I saw it at the bottom of the page as last message and it is also shown in todays posts.

To 2nd:
If I press on the login button I got redirected to my About me page and I am logged in again.
The same happens when I leave the page to any other forum related page: I get logged in again.

So I was wondering if this is a problem on my PC or a forum bug so I would appreciate if you could check this page out.

Ok it was probably some problem with my browser because now it is working correctly again.
