Subject: A question about FileSystemInfo

Hello,

Is FileSystemInfo class an internal (private) class, or is it depreceated, or obsolete or simply not yet documented? It seems useful.

Best regards,
Oblivion.

Well, the story of FileSystemInfo is a bit complicated.

Long time ago, Tom's idea was that it will allow unified handling of virtual filesystem. Practical example at the time was building something at remote machine with theide - Tom was using theide in windows to drive simple utility program on Solaris (over TCP/IP).

Anyway, that appears to be the last such use, so today I am using it just to identify the type of disks in FileSel on the local filesystem.

Similar issue is AProcess as the virtual base of LocalProcess....

Today, I would guess it is easier to setup shared filesystem and compile umk on target platform.
