Subject: Console app: Pressing any key does not close window!

Not sure if any one logged the following U++ feature. When a U++ console app has finished processing, one is prompted to close the window by pressing "any key". Unfortunately this doesn't work with the exception of pressing the enter key. Maybe this message should be updated, or the code for exiting the console app updated? Anyways, here's the code followed by a screen shot.

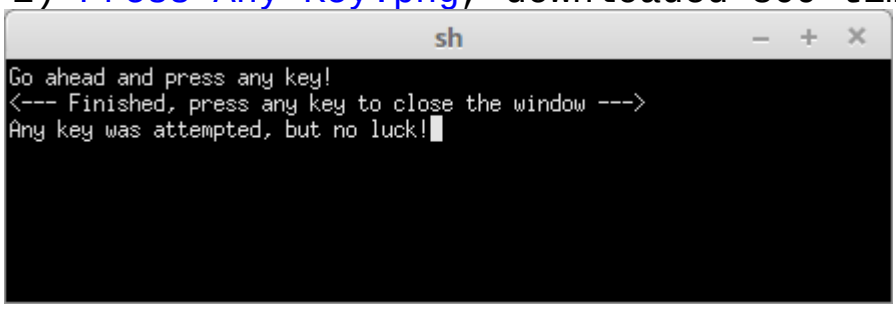

Code:
```
#include <iostream>
#include <iostream>

int main(int argc, const char *argv[])
{
 std::cout << "Go ahead and press any key!" << std::endl;
 return 0;
}
```

Hello,

Just press enter for some reasons the letters doesn't work for this certain terminal. I noticed that the KDE terminal works exactly the same way, so maybe on the POSIX operating system we should inform user to press "Enter" instead of any button.

Can you verify the behavior on Windows?

I verify the information is presented only on POSIX, so I decided to change the message after

verify it on various terminal (Gnome, KDE and xterm):

<--- Finished, press enter to close the window --->

Thanks for spotting this. You can try new version tomorrow.

Sincerely,
Klugier
