greetings

how to get position of some Ctrl on TopWindow, compare it with mouse pointer position a do some stuff...

Specifically something like this:

inside TopWindow

```
virtual void LeftDown(Point pos, dword flags) {  
    if(pos.x >= someCtrl.GetPos().x.GetA() && pos.x <= someCtrl.GetPos().x.GetA() &&  
        pos.y >= someCtrl.GetPos().y.GetA() && pos.y <= someCtrl.GetPos().y.GetA()) {  
  
        PromptOK("clicked inside");  
    }  
}
```

...it's wrong, but how?

Actually, in these cases it is often best to "go absolute".

There is "GetScreenRect" or "GetScreenView" methods that return position in screen coordinates and also GetMousePos functions, that returns absolute mouse position.
