Hello all

I have found a weird problem. Declaring this class:

```
struct MyData : public Moveable<MyData> {  
    MyData() {}
```

```
    double T;  
};
```

And declaring `Vector<MyData> data;` produces an error message in MSC15 and 17 (not in MinGW):

error C2523: 'Unit::~T': destructor tag mismatch

The code when the error is found is:

```
template <class T>  
inline void Destroy(T *t, const T *end)  
{  
    while(t != end) {  
        t->T::~T(); // HERE  
        t++;  
    }  
}
```

In some way, the name of variable double "T" clashes with template name "T"...

I mean, if variable would be "t" instead of "T", no problem :)

Try -Wall with GCC/MinGW, you'll probably get the warnings (I haven't tested, TBH).

Seems like a variant of template parameter hiding issue to me.

[http://www.open-std.org/jtc1/sc22/wg21/docs/cwg\\_active.html# 459](http://www.open-std.org/jtc1/sc22/wg21/docs/cwg_active.html# 459)

Best regards,  
Oblivion
