Hello all

Please check if we handle Daylight saving time properly in Windows.

I have checked it in C: local NTFS disk from Windows 10 and actual code does not report right hour.

However, from a Linux virtual machine, same code report properly the file time :)

```
Actual code for Windows:Time::Time(FileTime filetime) {
    SYSTEMTIME tm;
    FileTime ft;
    FileTimeToLocalFileTime(&filetime, &ft);
    FileTimeToSystemTime(&ft, &tm);
    *this = Time(tm.wYear, tm.wMonth, tm.wDay, tm.wHour, tm.wMinute, tm.wSecond);
}
```

```
Proposed code:Time::Time(FileTime filetime) {
    SYSTEMTIME tm, tml;
    FileTimeToSystemTime(&filetime, &tm);
    SystemTimeToTzSpecificLocalTime(NULL, &tm, &tml);
```

```
    *this = Time(tml.wYear, tml.wMonth, tml.wDay, tml.wHour, tml.wMinute, tml.wSecond);
}
```

See this: To account for daylight saving time when converting a file time to a local time, use the following sequence of functions in place of using FileTimeToLocalFileTime:

```
FileTimeToSystemTime
SystemTimeToTzSpecificLocalTime
```

FileTimeToSystemTime(&ft, &tm);
*this = Time(tm.wYear, tm.wMonth, tm.wDay, tm.wHour, tm.wMinute, tm.wSecond);
}
Proposed code: Time::Time(FileTime filetime) {
    SYSTEMTIME tml;
    FileTimeToSystemTime(&filetime, &tm);
    SystemTimeToTzSpecificLocalTime(NULL, &tm, &tml);

    *this = Time(tml.wYear, tml.wMonth, tml.wDay, tml.wHour, tml.wMinute, tml.wSecond);
}
```

See this: To account for daylight saving time when converting a file time to a local time, use the following sequence of functions in place of using FileTimeToLocalFileTime:

```
FileTimeToSystemTime
SystemTimeToTzSpecificLocalTime
```

Can you give me some context? E.g. testcase?

So far, I have tried with FileSel and time is reported correctly (for file that I have just saved and I have DST active here).

Mirek

Hello Mirek

It has happened in my own C: disk. It is not possible to give you a test case because it is as simple as doing a FileGetTime(fileName), but used for files in my Windows 10 NTFS system.

I can see it now, sorry. Applied.

(The problem was that I was testing with current "summer" file, while the problem appears to manifest with "winter" files).

What about

FileTime Time::AsFileTime() const

? Needs fixing too?

(Do not have time right now to check).

Thank you Mirek

It seems it is not necessary to change AsFileTime().

It uses LocalFileTimeToFileTime, that is explained here and it says "LocalFileTimeToFileTime uses the current settings for the time zone and daylight saving time. Therefore, if it is daylight saving time, this function will take daylight saving time into account, even if the time you are converting is in standard time"
