Using  
EncodeRTF(Get());  
as String EncodeRTF(const RichText& richtext... to save file,  
while having for example 3 round bullets:  
1st is ok, while  
2nd/3rd has one extra space in it when viewing it,  
while saving same file with GetQTF and opening it works as expected

And one more thing when viewing same qtf/rtf file with RichEdit,  
qtf version has colored/underlined/modifiable links while rtf does not,  
while exporting qtf to rtf and then opening rtf. Links are not preserved in the proses.  
I don't know if this is a bug though.

I don't know if this is a bug though.

Can you provide a testcase or at least QTF of source file so that I know exactly all circumstances?

Hopefully fixed.

It is not a nice fix, but should work. Anyway, further testing is appreciated.

You might want to check upptst/RTF for that...

Mirek

just to make sure,  
that 2nd issue didn't work too, eg  
Quote:And one more thing when viewing same qtf/rtf file with RichEdit,  
qtf version has colored/underlined/modifiable links while rtf does not,  
while exporting qtf to rtf and then opening rtf. Links are not preserved in the process.  
I don't know if this is a bug though.

Will try that out in next nightly build,  
btw - how many time is needed for this fixes to be available/merged into main download area?  
Next day?

sorry, missed that one. Well, URL links are not supported at the moment. Should be easy to add...

Nightly builds are usually build every night (surprise :). From the trunk. This fix is now in the trunk...
