Hi all

A colleague has asked me some questions about Skylark. He likes its SQL interface which is cleaner and more lean than 4GL like languages.

- Skylark sessions and database connections.
Is there an example of a Skylark web app that connects to MYSQL and does some CRUD on a single and can be used in a multi user environment?

- What are the deployment options of Skylark in a production environment?
Does it need to run in a web application server like Apache http Server or can the default Skylark http server be used on production as well?

Many thanks for you time.

There is no Skylark/MySQL example - the reason is that MySQL requires installation, so for the tutorial, we are using Sqlite3, which works out of box.

Anyway, if you take

 https://www.ultimatepp.org/srcdoc$Skylark$Tutorial$en-us.htm l#9

all you need to make it work with mysql is to replace Sqlite3Session with MySQLSession and change the connection code.

W.r.t. deployment, I think yes it could work as server out of box. I would still probably prefer adding apache layer, just for 'isolation'.
