Hello,

here [http://www.arilect.com/upp/forum/index.php?t=msg&th=1026 &start=0](http://www.arilect.com/upp/forum/index.php?t=msg&th=1026&start=0) I've posted my package that work pretty well under windows (with mingw compiler).

I tried to compile it under linux (ubuntu 5.10) but I get some error regarding the file .iml. It seems, say the compiler, I've redefined the images present in the *iml file. To say the truth I have non completely understood how the .iml works inside the package and the #define and #include that are used to let it to work. But it works under windows and it is OK. But why do not wotk under linux?

If somebody has time to loose with that package under linux should be aware to substituted in the file Newtownament.cpp

```
//#ifdef PRINT_DOS
    f1 = TD.PATHDIR + "\\www" + TD.FILETORNEO;
    mkdir(f1);
//#endif
```

```
//#ifdef LINUX
//  f1 = "mkdir " + TD.PATHDIR + "/www/" + TD.FILETORNEO;
//  system( f1 );
//#endif
```

with

```
//#ifdef PRINT_DOS
//  f1 = TD.PATHDIR + "\\www" + TD.FILETORNEO;
//  mkdir(f1);
//#endif
```

```
//#ifdef LINUX
    f1 = "mkdir " + TD.PATHDIR + "/www/" + TD.FILETORNEO;
    system( f1 );
//#endif
```

(a quick a dirty way to create a directory. Perhaps I should prefer the Mkdir method of FileSel class)

Luigi

    system( f1 );
#endif
```

(a quick a dirty way to create a directory. Perhaps I should prefer the MkDir method of FileSel class)

Luigi

Instead of LINUX (etc), you can use PLATFORM_LINUX (etc).

To create directory, use CreateDirectory

Mirek

To create directory, use CreateDirectory

Mirek

Yes, it looks much better. On my Navigate CreateDirectory was absent and I was not aware of it.
