Hi,

Can we add GetPeerAddr to WebSocket? Right now there is no function that returns client's address.

It is just single line in Inet.h:

```
dword GetWaitEvents() const { return WAIT_READ|(!out_queue.GetCount() * WAIT_WRITE); }
SOCKET GetSOCKET() const    { return socket ? socket->GetSOCKET() : 0; }
String GetPeerAddr() const  { return socket ? socket->GetPeerAddr() : ""; } //<---- NEW LINE
```

BTW,

GetSOCKET() should return INVALID_SOCKET not 0 when socket is nullptr.
