Subject: MySQL & remote DB

Hello,

I have successfully compiled and tested a U++ program with MySQL on my local XAMPP server.
I can do any query on the local DB.

The problem come when I try to put the DB on a remote server. It seems the connection is made but no output come.
I used the service offered by db4free.net that claims to allow remote access (perhaps only from PHP script?).

Does anybody has a solution? Is there online some DB to test my program?

Thanks,
Luigi

Yes, I have one.
I have installed MySQL workbench and being able to connect remotely on heliohost.org. Then I discovered that the server is based on Linux and table and column name are CASE SENSITIVE! I have not noticed it on XAMPP.

So now it works as expected.
Thanks,
Luigi
