Hi there,

Having a try on CompDir example, i have selected->
C:\Users\bozero\Downloads\upp-mingw-12016.
Then I try to select other directory, it popup a box:

Unable to read the directory !

C:\Users\bozero\Downloads\upp-mingw-12016\upp\out\examples\MINGW.Debug.Debug_Full.Gui
.Noblitz\upp-mingw-12016

The system cannot find the path specified.

Is it a default behavior? It seems try to locate (the path of application)\(the recent directory name).
Thanks in advance.

My system:
window 10,
upp-mingw-12016

Having a try on CompDir example, i have selected->
C:\Users\bozero\Downloads\upp-mingw-12016.
Then I try to select other directory, it popup a box:

I am sorry, I am not sure what is the situation.

"selected" where? Perhaps post some screenshots...

Mirek

Sorry for the delayed response. Please find the attached gif file in which marked with red arrow to show where the mouse was clicked. I noted that when the right triangle was clicked, the error message will pop up and I need to select the folder from scratch. Thanks in advance.
