Subject: DEPRECATED flag

Hi,

Trying to compile a big source tree I found a template that brings problems : IsEqual(T&, T&)
The template is inside "obsolete.h" file in Core, which should be disabled using NODEPRECATED
build flag.
Trying it I get tons of compiler error inside Core.

Is it still "work in progress" ?

Ciao

Max

Yes, something I planned to do, but did not.

Anyway, thanks for poking me, Core should be now cleansed (means, it compiles with
NODEPRECATED flag).

Mirek

Thank you!

I solved removing all "using namespace Upp" from my headers, but it's a real hassle and doesn't cope well with blitz.
I'll try again the "nodeprecated" flag.

Ciao

Massimo

Hi Mirek,

Core is ok, indeed, but almost no other package (i.e.: CtrlCore) builds with NODEPRECATED flag.
There are plans to fix it ?

Massimo

Not a high priority now... it was mostly a documentation feature.
