
Subject: how to #define/#include correctly the .iml file

[View Forum Message](#) <> [Reply to Message](#)

This topic is connected with another post where I signaled that linux wont compile. The problem is in the #define and #include of .iml that perhaps work under windows for the wrong reason.

I've vegamain.h that is included everywhere except in optionImage.cpp. Here it is vegamain.h:

```
...
#include <Vega3/OptionImage.h>
#include <Vega3/TwoCtrl.h>

#define IMAGECLASS Vega3Img
#define IMAGEFILE <Vega3/Vega.iml>
#include <Draw/iml.h>
...
```

OptionImage.h, that is included only in optionImage.cpp, read:

```
...
#define IMAGEFILE <Vega3/Vega.iml>
#include <Draw/iml_header.h>
...
```

and then main.cpp where I've

```
#include "VegaMain.h"
...
#define IMAGEFILE <Vega3/Vega.iml>
#include <Draw/iml_source.h>
...
```

All this work under windows for unknown reasons for me. But I suspect it is even wrong and under linux produce complain. Can somebody (I know who) confirm that all these cross define/include are correct?

Thank you.

Luigi

Wrong.

"iml.h" is just combination of "iml_header.h" and "iml_source.h" - means it causes troubles if you

have any of them (duplicite symbols).

Also, repeat CLASSNAME define for any include.

Mirek

Also, repeat CLASSNAME define for any include.

Mirek

Thank you. After many tests I've resolved the problem and now even the linux version works . Perhaps maybe useful to let know how I've distributed the define and include:

vegamain.h (stay everywhere in each cpp file)

```
...
#define IMAGECLASS   Vega3Img
#define IMAGEFILE    <Vega3/Vega.iml>
#include <Draw/iml_header.h>
...
```

vegamenu.cpp (uses some images in Vega.iml)

```
...
#define IMAGECLASS   Vega3Img
#define IMAGEFILE    <Vega3/Vega.iml>
#include <Draw/iml_source.h>
```

vegatab1.cpp (uses some images in Vega.iml)

```
...
// #define IMAGECLASS   Vega3Img // with it I got error
#define IMAGEFILE <Vega3/Vega.iml>
#include <Draw/iml_source.h>
...
```

in the previous file if I use "#define IMAGECLASS" the compiler complains

```
C:\Vega\Vega3\VegaTab1.cpp: In function `void Avail3(One<Ctrl>&)':  
C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgYes' undeclared (first use this function)  
C:\Vega\Vega3\VegaTab1.cpp:49: error: (Each undeclared identifier is reported only once for  
each function it appears  
in.)  
C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgNo' undeclared (first use this function)  
C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgMaybe' undeclared (first use this function)  
C:\Vega\Vega3\VegaTab1.cpp: In constructor `VegaTab1::VegaTab1()':  
C:\Vega\Vega3\VegaTab1.cpp:89: error: `imgYes' undeclared (first use this function)  
C:\Vega\Vega3\VegaTab1.cpp:128: error: `female' undeclared (first use this function)  
C:\Vega\Vega3\VegaTab1.cpp:128: error: `male' undeclared (first use this function)  
Vega3: 1 file(s) built in (0:08.07), 8078 msecs / file, duration = 8094 msecs
```

vegatab4.cpp (uses some images in Vega.iml)

```
...  
#define IMAGEFILE <Vega3/Vega.iml>  
#include <Draw/iml_source.h>  
...
```

But this last one works even if I set

```
...  
//#define IMAGEFILE <Vega3/Vega.iml>  
//#include <Draw/iml_source.h>  
...
```

Only single ".h" and single ".cpp" placement is needed - as long as .cpp include that ".h" (it is in fact same as declaring (in .h) / defining (in .cpp) class and its methods).

Means you can most likely delete .iml include from vegatab1.cpp and vegatab4.cpp.

Mirek

In vegatab4.cpp you are right, but in vegatab1.cpp if I remove it I get complain from the compiler:

C:\Vega\Vega3\VegaTab1.cpp: In function `void Avail3(One<Ctrl>&)':

C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgYes' undeclared (first use this function)

C:\Vega\Vega3\VegaTab1.cpp:49: error: (Each undeclared identifier is reported only once for each function it appears in.)

C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgNo' undeclared (first use this function)

C:\Vega\Vega3\VegaTab1.cpp:49: error: `imgMaybe' undeclared (first use this function)

C:\Vega\Vega3\VegaTab1.cpp: In constructor `VegaTab1::VegaTab1()':

C:\Vega\Vega3\VegaTab1.cpp:89: error: `imgYes' undeclared (first use this function)

C:\Vega\Vega3\VegaTab1.cpp:128: error: `female' undeclared (first use this function)

C:\Vega\Vega3\VegaTab1.cpp:128: error: `male' undeclared (first use this function)

Luigi

Do you include "vegamain.h" there?

Mirek

With the 606-dev3 this issue has been totally resolved.
