You ask me?

I ask you , because I can't find that in layout designer(or I am overseeing something?)...

Ah... It is Option with ThreeState activated...

Can you post the layout part of your *.lay that regard the error (CTRL+T and you see the text
mode of lay file)?.

sure

clean new app:

LAYOUT(MyAppLayout, 200, 100)

ITEM(Option, oMyOption, SetLabel(t_("someName")).ThreeState(true).LeftPosZ(60,
42).TopPosZ(16, 15))

END_LAYOUT

compiler out:

```
----- CtrlLib ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 1 / 9)
----- CtrlCore ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 2 / 9)
----- RichText ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 3 / 9)
----- Draw ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 4 / 9)
----- Core ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 5 / 9)
----- Image ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 6 / 9)
----- plugin\png ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 7 / 9)
----- plugin\z ( GUI GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 8 / 9)
----- MyApp ( GUI MAIN GCC DEBUG DEBUG_FULL BLITZ WIN32 ) ( 9 / 9)
main.cpp
C:/MyApps/MyApp/MyApp.lay: In function `void InitLayout(Ctrl&, L&, D&, MyAppLayout__layid&)
[with L = MyApp, D = MyApp]':

C:/upp/uppsrc/CtrlCore/TopWindow.h:210: instantiated from `void CtrlLayout(T&) [with T =
MyApp]'
C:/upp/uppsrc/CtrlCore/TopWindow.h:218: instantiated from `void CtrlLayout(T&, const char*)
[with T = MyApp]'
C:/MyApps/MyApp/main.cpp:7: instantiated from here
C:/MyApps/MyApp/MyApp.lay:2: error: 'class Pusher' has no member named 'ThreeState'
MyApp: 1 file(s) built in (0:05.73), 5735 msec / file, duration = 5735 msec, parallelization 0%
```

There were errors. (0:06.00)

have any idea?

have any idea?

It is as suspected... Look this line:

```
C:/MyApps/MyApp/MyApp.lay:2: error: 'class Pusher' has no member named 'ThreeState'
```

In it the is the answer: SetLabel() return a class of type Pusher to which you can't apply the method .ThreeState().

The solution: simply remove .ThreeState in that line and use
ITEM(Option, oMyOption, SetLabel(t_("someName")).LeftPosZ(60, 42).TopPosZ(16, 15))

Then in the constructor add the line:
oMyOption.ThreeState();

and the threestate button will appear.

If you do not use SetLabel() (empty label), then the you can apply the ThreeState() method directly in the designer.

Well, this is "hierarchy ordering bug" in .usc script, something to fix.

To explain: Those "modifiers" (like ThreeState) are methods returning *this to be able to chain them.

However, there is potential trouble, as "modifier" can be method of and return base class and then be followed by "modifier" for derived class. Means, modifiers for derived classes have to be first in .lay file... which can be specified in .usc file (file with widgets description), but sometimes is faulty.

Please try this fix:

CtrlLib/CtrlLib.usc, line 328:

```
ctrl Option {  
  group "Push";  
  
  Text  SetLabel ? @1 "Option text";  
  >Base;
```

(the difference is "@1", which moves that method "to the right" after ThreeState etc...)

(the difference is "@1", which moves that method "to the right" after ThreeState etc...)

Mirek

Yes, it works. Now I get the sequence

```
ITEM(Option, oMyOption, ThreeState(true).SetLabel(t_("my option")).LeftPosZ(60, 68).TopPosZ(16, 15))
```

That seems better as threestate works immediatly without workaround.

```

That seems better as threestate works immediatly without workaround.

Luigi

Only now I've seen a bad side effect: the tabctrl and the arrayctrl are not correctly shown in the right manner in designer. Moreover both control do not shown the full list of their properties. For this reason I came back to the previous state.

Mirek

This is what I see with

```
Text  SetLabel ? @1 "Option text";
```

and ... (see next post)
