When I tried to compile my C++17 project, I got errors:

```
Core/heap.cpp (249): error: ISO C++1z does not allow dynamic exception specifications
(): void *operator new(size_t size) throw (std::bad_alloc)      { void *ptr =
UPP::MemoryAlloc(size); return ptr; }
```

```
Core/heap.cpp (252): error: ISO C++1z does not allow dynamic exception specifications
(): void *operator new[](size_t size) throw(std::bad_alloc)    { void *ptr =
UPP::MemoryAlloc(size); return ptr; }
```

Will C++17 support be added?

Definitely. I believe this is the only thing that needs to be fixed...
