Subject: Resizing the font of the Y scale bar of a scatter

Hi there,
I need to resize the font on the Y scale bar of a scatter (see attached image). I have tried with SetLabelsFont and even with SetTitleFont, without results. I noticed that there is a Graduation_FormatY method, but I do not understand what parameter I have to use.
Thanks,
gio

SetReticleFont()

Hi Koldo,
there must be something wrong with my code. When I am typing and I try to add .SetReticleFont(), it does not appear in the list of avilable methods for the object. There are .SetRange(), .SetRect() and many others, but there is no .SetReticleFont() method. If I add it anyway, I got the following error:

error: 'class ScatterCtrl' has no member named 'SetReticleFont'; did you mean 'SetTitleFont'?

The object is declared as ScatterCtrl and, apart this, is working correctly.

Hello Giorgio

ScatterCtrl class is derived from ScatterDraw, so all public and protected ScatterDraw methods are accessible to ScatterCtrl.

Maybe the problem comes because you are chaining SetReticleFont() to a ScatterCtrl method.

To be sure, please open ScatterDraw.h file and look for SetReticleFont() method.

Uhm, the plot thickness. I have no SetReticleFont() method in ScatterDraw.h. I have the latest stable version of Upp (build 11873) and I did not change the upp sources. Has that method been introduced recently?

Yes, ScatterDraw/ScatterCtrl have had many changes recently.
I advice you to update.

I see... there is some plan for the release of a stable version of upp or should I go for the nightly build?

At least referring to Scatter, actual nighty build is better than stable version.
