There was a trivial issue that prevented compilation in c++17. It is now fixed...

Hello, Mirek!

I've encountered with some compilation errors like this:

```
.../upp/uppsrc/plugin/pcr/lib/pcr_ord2utf8.c (72): error: ISO C++17 does not allow 'register'
storage class specifier [-Wregister]
```

Here is a bit of code:

```
register int i, j;
```

The same error occurred in several files, so I did a little patch.

Accidentally, I have upgraded pcr to 8.43 (as part of release process), which seems to fix the issue as well...

Hello,

I checked the issue and it seems that update will not fix the issue. The problem is that "register" keyword is removed from c++17. Here is a link to our current version of one of the file of plugin/pcr - https://github.com/ultimatepp/mirror/blob/master/uppsrc/plugin/pcr/lib/pcr_compile.c and it contains following line of code:

```
register pcr_uint32 cc = *(++ptr);
```

It will not compile in c++17 enviroment...

Sincerely,
Klugier

Hello,

Some time ago I uploaded a patch here, as per Novo's suggestion:
https://www.ultimatepp.org/forums/index.php?t=msg&th=10590&goto=51321&#msg_51321

It was for the older version, but it should also work for the new version.

Best regards,
Oblivion

My apologies, I was not testing correctly (for some reason current mingw will compile that as C++17 without errors) and doing wrong search for 'register'.

As there seem to be many more 'register' instances in current pcr version, I have tried to remedy the problem by turning pcr compilation to "C" (where register is allowed).

Mirek
