Hi everyone,

My apologies i search alot about how to start my app in background but didn't find the way to do it.
So i'm calling for help. When we call App().Run(), it open the topwindow, i tried with Minimize but
it's not like when we call Hide().
My issue looks realy simple, i mean Hide() after Run() but i failed to manage it :'(

Sorry for my bad english and i hope someone could help me figure it out.

Regards,

Qwak

Simple answer: Don't (use Run). Nobody says that your application has to have the main window.

Hi Mirek,

Thank you for your reply, my main class was a child of a layout top window and has a trayicon.

I changed everything to make my main class a child of trayicon so i can still call Run and don't show my topwindow.

Sry to pollute forums with my dummies question.

Qwak.
