UppCAD (A cad based on UPP + OpenCascade 3d modelink kernel) is growing... in short it will get it's website!

Here a small demo of its capabilities

<https://www.uppcad.com/tutorials-it/draw-a-box.html>

Hello,

FYI, The movie works only on Chrome. It doesn't work on Edge and Firefox.

Sincerely,  
Klugier

Hello,

I belive, I need to install "Media Feature Pack for N versions of Windows 10" to enjoy this movie on my Windows 10 :)

Sincerely,  
Klugier

Uhhh... it should be normal mp4 file, encoded in h264 by blender. The only "weird" stuff is the framerate, limited to 15 fps.  
It should be visible in any "modern" browser... I'm on firefox on PC and Dolphin on Android, both works

It looks great in my W10 :)

Excellent Massimo! You have integrated finely OpenCascade with U++.

Thanks, Koldo!

I've the website almost ready... still no download, I must fix some stuffs and then I'll publish it.  
If you want to look at it, it's here :

<https://www.uppcad.com>

No need to say it :d

I'll add it on website and also on application, when ready

Hello Massimo,

It looks grate! I like everything about this software - the first thing is logo. It contains delicate U++ accent in it. The second thing I like that it is created using U++ framework.

Good luck and long live U++ Cad!

Sincerely,  
Klugier

Hi,

if you like to test it, now it's on website's download page :

<https://www.uppcad.com/download.html>

You must register the application on first run to be able to save the drawings and to export STL files; on registration

module it's enough to enter the e-mail and the name, then you'll get a registration code for a month of free usage.

Feel free to ask for more time if you like... I can extend the evaluation time.

The application is able to update itself when new version is available (along with libraries, examples, docs and so on) thanks to my Updater2 package which, if you're interested, I can put on bazaar. It's a small and fast installer/updater for windows and linux.

The current 'Updater' bazaar package is able to update only the executable file.

Ciao

Massimo

p.s.: any feedback is more than wellcome :d

Hi,

I added a small "first steps" page, to allow basic usage of the cad (opening a file, zoom/pan/rotate view and a few more) :

<https://www.uppcad.com/docs/first-steps.html>

Ciao

Massimo

Dear Massimo

I wanted to ask you if UppCAD is simple to use, so it would be valid to draft parts for a 3D machine and for doing predesigns of different things.

Now I am using SketchUP with a very old version with permissive license. However I would like to use something much more free, and for me Blender has a very steep learning curve.

Hi Koldo,

It depends on what you call "simple" ;)

For example, I hate sketchup, but I'm used to AutoCad.

My cad has an usage quite similar to AutoCad. It's still far from being complete, but can already be used to draft parts for 3d printing and so.

I'm extending it, in the meantime... if you want to try it you're welcome.

And also if you need more than one month... just after registration.

By now you can :

- do 2d drafting
- create 3d objects from 2d draftings
- manipulate and modify 3d objects

Just look at the couple of video tutorials and at the documentation pages (by now just install instructions and first steps).

What you can't do now is quote the drawing and print them.  
I think to start with printing part right now, but I guess it'll take me some time.  
Quotes are simpler to implement but also quite a lot of coding... I'll do them after print part.

I will also implement python scripting, probably the 3-rd task after printing and quotes.  
If you need some more details, please ask!

Ciao

Massimo

p.s.: the app is auto-updating, so once installed you'll get always the latest version when available.

Hi Massimo,

I tried to install. But install is crashing.  
Win10 64bit.

let me know where can I send you crash report files.

[View Forum Message](#) <> [Reply to Message](#)

What do you mean for "crashing" ?  
In the installer or the application ?

(the CAD requires a decent graphic card with decent OpenGL drivers...)

Hi Deep,

Can you give me some detail ? If you want I can post the installer's sources without problem, but it's a bit difficult to debug because the installer get copied around and call itself some times.
