```
int f0(int a, int b)
{
}

int f1(int a)
{
}

int f2(int c)
{
}
```

If I open 'Goto line or symol window' I can see:

```
int f0(int a, int b)
int f1(int a)
int f2(int c
int f0(int a, int b)
int f1(int a)
int f2(int c
```

The list is just doubled..

Now if you add ';' after..

```
int f1(int a);
{
}
```

all functions after f1 will be ignored (not displayed). I think this behaviour should be change (the best would be to list all functions and set background in cell to red where function definition has ; after name, however it is hard to distinguish if it is a forward declaration or error in code - just treat it as kind of an idea ).
