## Subject: [Linux - Gnome] QTF text is unreadable with dark-themes Posted by Oblivion on Sat, 15 Dec 2018 21:53:08 GMT

View Forum Message <> Reply to Message

Hello,

On linux/GNOME 3 (3.30) The qtf text is unreadable under dark themes and it seems impossible to change it from within theIDE.

This happens with every dark theme (including the default Adwaita-dark).

Screenshot (with Adwaita dark):

Best regards, Oblivion

I have committed the temporary fix.

In general, the problem here is that we need to 'reinterpret' colors set for white theme over to the dark (because those texts are after all written for white theme).... At least, this conversion is now refactored into two PaintInfo methods (ResolveInk and ResolvePaper).

Mirek

Hello Mirek.

I've updated upp & Thelde. The text is now readable. (In most cases). Thanks!

Remaining issues that I've noticed (as this is a temporary fix, just to inform you): QTF text -currently- has no color and it cannot be read on white background (or same color for ink/bkg).

Best regards, Oblivion

Well, I have 'invented' Color DarkTheme(Color) function to convert colors for dark theme and I am now using it with RichTextCtrl. Please check.

Hello Mirek,

Before you release 2019.1, I've noticed another problem:

Best regards, Oblivion
