Hi,

I've this problem in Windows 7; the DHCTRL is inside a TabCtrl.

It doesn't get refreshed when moving another window over it. The refresh happens ONLY when I move the mouse over an object (which triggers the update from my code). You can see from the image below:

I tried to set some breakpoints in refresh and status code, it doesn't get called when moving something over my control.

Putting a breakpoint inside DHCtrl's WindowProc shows that WM\_PAINT and WM\_NCPAINT event are indeed sent by windows, but probably they're not processed.

On Linux it's all ok, as usual.

The above problem is ONLY on Windows7 on a real machine.

The same thing DOESN'T HAPPEN on a windows 7 under VirtualBox... weird.

Hi,

I'm fixing some printing stuffs on my app, then I'll look at this problem.

The weird stuff is that it behaves differently on VirtualBox and on a real machine, both with windows 7...

Hi Mirek,

this is "solved" modifying the window proc of my ctrl like this :

```
LRESULT OCEView::WindowProc(UINT message, WPARAM wParam, LPARAM lParam)
{
    if(message == WM_PAINT)
    {
        RefreshLayout();
    }
    return DHCtrl::WindowProc(message, wParam, lParam);
}
```

Don't ask why... I really don't know. I've tried with everything else with no changes or crashes. This one works. Simple Refresh() doesn't, nor UpdateWindow nor anything else.

Ciao

Massimo

Would it work if put after

```
LRESULT GLCtrl::GLPane::WindowProc(UINT message, WPARAM wParam, LPARAM lParam)
{
    if(message == WM_PAINT && s_openGLContext) {

    ?
}
```

Hi,

I'm not using GLCtrl but DHCtrl directly...OpenCascade library already has the OpenGL layer, just needs an hwnd.

EDIT

Thinking a bit more... I could use the generic interface of OpenCascade, which should do the job with your GLCtrl

control. It's called Aspect\_NeutralWindow, in replacement of WNT\_Window and X11\_Window, and requires the "manual" context creation, which your control does.

control. It's called Aspect\_NeutralWindow, in replacement of WNT\_Window and X11\_Window, and requires the "manual" context creation, which your control does.

Well, could you please test our OpenGL Ctrl (e.g. OpenGL/examples) with Win7?

Mirek
