Hi!

Is there any sample or some hints on how to use an ActiveX-Control inside my UPP application? I went through the various examples provided but couldn't find anything.

Many thanks in advance for any hints or help to get this done.

Regards

I haven't used them with upp but what if you start in constructor
this->ActiveX(); ?

Thanks, I will try along this line.

I'm not very familiar with Win32 programming. Just trying to find out more infos. I will post here if I get it running.
