Hi!

When I create a new project of type Win32 API project (no U++) and next I try to compile it an error is raised saying:

```
/home/user1/MyApps/sservice/sservice.cpp (1): fatal error: windows.h: No such file or directory
```

When I try to find windows.h I can see it in:

```
/home/user1/upp/bazaar/plugin/tcc/include/winapi/
```

How can I configure that path in order to be possible to find windows.h when compiling?

Thanks

Sorry, wrong operating system!

Done!
