
Subject: Copying, installing, and using *.scd and *.udc speller dictionaries...

This patch:

- Copy dictionary files (*.udc and/or *.scd) used by theide speller inside ~/.upp/theide/speller (default make install) or /usr/share/upp/speller/ (posix install)
- It also fix Core/Speller.cpp and ide/Setup.cpp search paths accordingly.

I can modify doinstall and upp.spec but not Core/Speller.cpp and ide/Setup.cpp.

Can someone review my patch and apply it?

Regards :)

We do not want want to copy .scd files. It should be .udc only (frankly, the issue is 9 years overdue).

No problemo. 8)

The patch that doesn't use *.scd anymore but only udc files is attached.
