Someone already made this proposal and FontSel, i just extended it a bit with bg/fg color, which should be made unavailable programatically if clrSelection is undesired. Someone should review this and maybe modify with some cunning idea, if something is missing.

It looks like this:

Hello,

Did you consider to put your code into the GitHub? I think it is nice place to start sharing your U++ code. If you post I will add link to your repository on following page  
[https://www.ultimatepp.org/www\\$suppweb\\$AssociatedProjects\\_en-us.html](https://www.ultimatepp.org/www$suppweb$AssociatedProjects_en-us.html).

The only think I do not like with this new window is the placment of ok/cancel buttons. In my opinion it should be place in right down corner. It is the standard placement for such buttons.

Sincerely,  
Klugier

no, no at the moment,  
but maybe in the future, if i will have a little bit more code to share.

Buttons are ok as i am concerned,  
except from current view, it's not obvious which color is bg/fg.
