
Subject: Moving folder and TheIDE compiler paths?

I created a small package to learn how the FileBrowser in \Bazaar\ works. Once it was functional, I recreated the slic3r package in myApps, and copied the files over only the needed folders from \Bazaar to myApps. These are:

- \Slic3rViewer (my code)
- \PolyXML
- \Functions4U
- \Controls4U
- \ClassFactory

I now have 3 versions of the slicer package in The IDE under these 3 'Assemblies' with the following compile results:

examples-bazaar

- compiles using only files in folders in \bazaar\

MyApps-bazaar

- compiles using \myApps\slic3r\slic3r package, but links to the other folders in \Bazaar\

MyApps

- errors out with a number of path not found errors starting with C1083 cannot open...'Function4U/Function4U.h.' I can insert the full path in the #include and the file is found, but then reporting another path errors, etc. So the compiler is not find either the local folders OR the ones in \bazaar.

Note: I deleted the \out\folders each time to get a full compile.

I did not find any environment paths, or paths in TheIDE configuration.

What am I missing?

Is there a alpha or beta version of the FileBrowser as a widget I can test?

Thanks

If needed I can upload the 5 folders from \Bazaar.

Hello DrOldies,

You can use directly "MyApps-bazaar" instead of "MyApps" to directly use bazaar projects in your projects. However, you can manually configure your "MyApps" assembly to points bazaar assembly - however it is not require, beacuse we have "MyApps-bazaar" assembly by default. For

more information how to do it please read following documentation topic -
[https://www.ultimatepp.org/app\\$ide\\$ConfiguringPackagesAssemblies\\$en-us.html](https://www.ultimatepp.org/appideConfiguringPackagesAssemblies$en-us.html) (The screenshots are a little bit outdated, but the idea is the same).

I don't know anything about FileBrowser from bazaar, but maybe FileSel from standard U++ widget library is what you looking for - [https://www.ultimatepp.org/src\\$CtrlLib\\$FileSel_en-us.html](https://www.ultimatepp.org/src$CtrlLib$FileSel_en-us.html).

Sincerely,
Klugier

Thanks for both recommendations. myApps-Bazaar's purpose is obvious now that you mention it.
