Debian & Upp svn 12781

Found I cannot run ANY app using debug;
 - upgraded g++/gcc/gdb - no change
 - downloaded, compiled & installed 12781
   but still cannot debug any app, from simple hello-world to any in examples/tutorial

When Debug(F5) is invoked the debug-environment's windows/frames flashes and nothing more happens

Any ideas?
thx

PS: (I also updated all dependencies specified in 'domake.md')

Also found an untraceable/not-implemented? function StartDebug() on line 888 in ide.h

Still waiting for help on question   https://www.ultimatepp.org/forums/index.php?t=msg&th=105
57&start=0&
which may help to resolve this problem also

This is impacting seriously on my productivity, please can whoever is responsible for the affected code give some input

thx

Solution:
Just after I made the above PS I tried another IDE (qt-creator) which complained about libbabeltrace-ctf
not found. I found it was installed but wrong version, so upgraded it and now stuff works as they should.

(I would still like question   https://www.ultimatepp.org/forums/index.php?t=msg&th=105
57&start=0&
to be answered, though, please?!)
