Subject: [solved] Is it an encoding problem ?
Posted by Xemuth on Wed, 06 Mar 2019 13:33:20 GMT

Hello community,

I'm actually serialing into XML some french (with accent :twisted:) word.
The result looks like this :

Problem is starting when I deserialize the Xml by reading my file using FileIn object
then passing the string of my file to my deserialize function.

Indeed, while I'm looking the value of my String I got something like that :

Can someone explain me why ? Everything is supposed to be UTF-8...

Thanks in advance

Have a good day

Problem solved,

it came from the encodage...
just had to do this : theWord = ToCharset(CHARSET_DEFAULT,theWord,CHARSET_CP850);
