Hello community,

I'm trying to use the SSLCertificate() method from TCPSocket and this one asking for a cert and key
but, since I'm on Windows, all the certificate are stored in the windows cert store.
So I juste used the windows store API (wincrypt.h) to retrieve the certificate in PCCERT_CONTEXT format.

(https://docs.microsoft.com/en-us/windows/desktop/api/wincryp t/ns-wincrypt-_cert_context => here is the PCCERT_CONTEXT Structure)

Here come the question :
Do Upp include something to link my cert (PCCERT_CONTEXT) to HTTPRequest ?

Thanks in advance

have a good day /Week end
