Hello,

I am experiencing a weird behavior (under X11 mode). The menu has an additional Search ctrl that I haven't coded.

See picture:

This is the code

```
void VegaMain::VegaMainMenu(Bar& menu)
{
    menu.Add(t_("File"), THISBACK(File) ).Key(K_CTRL_F);
    menu.Add(t_("Standing"), THISBACK(Standing) ).Key(K_CTRL_X);
    menu.Add(t_("Extras"), THISBACK(Extras) ).Key(K_CTRL_X);
    menu.Add(t_("Rating Report"), THISBACK(ReportCB) ).Key(K_CTRL_R);
    menu.Add(t_("Help"), THISBACK(Help) ).Key(K_CTRL_H);
}

//....
// and then
//....
void VegaMain::Help(Bar& bar)
{
    bar.Add(t_("Content"), THISBACK(HelpContent));
    bar.Separator();
#ifdef PLATFORM_LINUX
    bar.Add(t_("Register ..."), THISBACK(HelpRegister));
    bar.Add(t_("Registered to ..."), THISBACK(HelpRegistered));
    bar.Separator();
#endif
    bar.Add(t_("Check Update"), THISBACK(CheckUpdate));
    bar.Separator();
    bar.Add(t_("About"), THISBACK(HelpAbout));
}
```

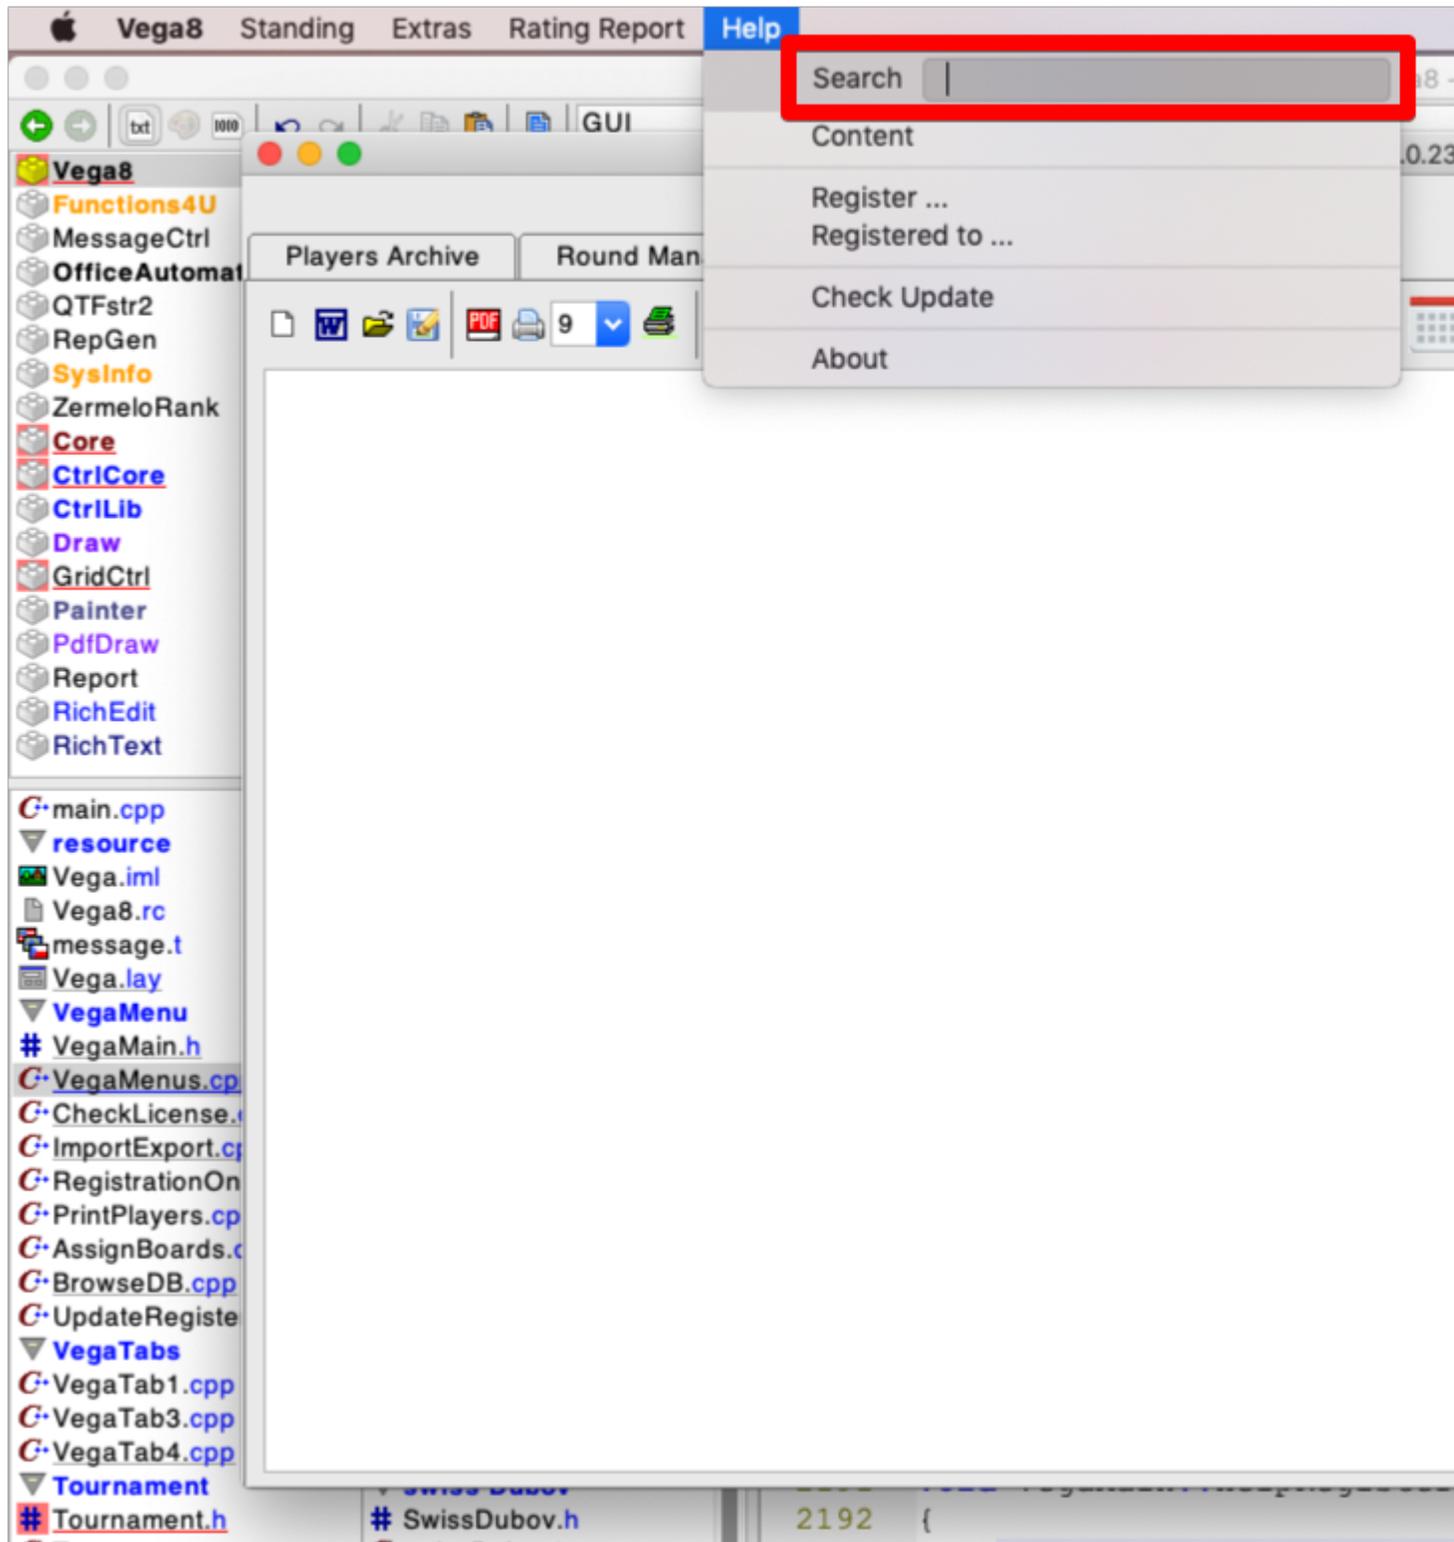

Moreover all the items do not work, i.e. they do not perform any action.

The same code works OK under Windows and Linux.

Thanks,
Luigi

Why do you think this is X11 mode?

Anyway, that search field is added by macos. We are not yet sure what are exact circumstances.

OK, I think I know how to disable this:

<https://stackoverflow.com/questions/22075413/remove-or-customize-search-from-help-menu>
<https://developer.apple.com/documentation/appkit/nsapplication/1428644-helpmenu?language=objc>

I will try this fix soon...

If I use

```
menu.Add(t_("Help "), THISBACK(Help) ).Key(K_CTRL_H);
```

and then not use the "Help" word then the search ctrl disappear and the whole dropline works as expected. There is some collision with cocoa.

Luigi

I have committed possible fix of the whole to the trunk.

I have committed possible fix of the whole to the trunk.

It doesn't work in my case. I'm still getting the search bar.

My code (it looks fine to me):

```
void wnb3::SetMenuBar()  
{  
#ifdef PLATFORM_COCOA  
SetMainMenu(THISBACK(main_menu));  
menubar.Hide();  
#else  
menubar.Set(THISBACK(main_menu));  
#endif  
}
```

Full recompilation. TheIDE itself was compiled a moth ago.

What about now (trunk)?

I couldn't compile because of GUI:
dword SystemDraw::GetInfo() const
{
 return DRAWTEXTLINES|GUI;
}

{
 return DRAWTEXTLINES|GUI;
}

For now, please just delete "|GUI".

For now, please just delete "|GUI".

The search bar has disappeared.

Thanks a lot!
