Hello,

I am experiencing a weird behavior (under X11 mode). The menu has an additional Search ctrl that I haven't coded.

See picture:

This is the code

```
void VegaMain::VegaMainMenu(Bar& menu)
{
menu.Add(t ("File"), THISBACK(File) ).Key(K CTRL F);
menu.Add(t_("Standing"), THISBACK(Standing)).Key(K_CTRL_X);
menu.Add(t ("Extras"), THISBACK(Extras) ).Key(K CTRL X);
menu.Add(t ("Rating Report"), THISBACK(ReportCB) ).Key(K CTRL R);
menu.Add(t_("Help"), THISBACK(Help) ).Key(K_CTRL_H);
}
//....
// and then
//....
void VegaMain::Help(Bar& bar)
bar.Add(t ("Content"), THISBACK(HelpContent));
bar.Separator();
#ifndef PLATFORM LINUX
 bar.Add(t_("Register ..."), THISBACK(HelpRegister));
 bar.Add(t_("Registered to ..."), THISBACK(HelpRegistered));
bar.Separator();
#endif
bar.Add(t_("Check Update"), THISBACK(CheckUpdate));
bar.Separator():
bar.Add(t ("About"), THISBACK(HelpAbout));
}
```

Moreover all the items do not work, i.e. they do not perform any action.

The same code works OK under Windows and Linux. Thanks, Luigi

Why do you think this is X11 mode?

Anyway, that search field is added by macos. We are not yet sure what are exact circumstances.

OK, I think I know how to disable this:

https://stackoverflow.com/questions/22075413/remove-or-custo mize-search-from-help-menu https://developer.apple.com/documentation/appkit/nsapplicati on/1428644-helpmenu?language=objc

I will try this fix soon...

If I use

menu.Add(t_("Help "), THISBACK(Help)).Key(K_CTRL_H);

and then not use the "Help" word then the search ctrl disappear and the whole dropline works as expected. There is some collision with cocoa.

Luigi

Luigi

I have committed possible fix of the whole to the trunk.

I have commited possible fix of the whole to the trunk.

It doesn't work in my case. I'm still getting the search bar.
My code (it looks fine to me):
void wnb3::SetMenuBar()
{
#ifdef PLATFORM COCOA

```
SetMainMenu(THISBACK(main_menu));
menubar.Hide();
#else
menubar.Set(THISBACK(main_menu));
#endif
Full recompilation. The IDE itself was compiled a moth ago.

I couldn't compile because of GUI:
dword SystemDraw::GetInfo() const
return DRAWTEXTLINES|GUI;
}

Novo wrote on Thu, 28 March 2019 23:58l couldn't compile because of GUI:
dword SystemDraw::GetInfo() const
{
return DRAWTEXTLINES|GUI;
For now, please just delete "|GUI".
