Subject: How to set the icon App
Posted by forlano on Wed, 27 Mar 2019 16:05:23 GMT

Hello,

for Windows I was able to set an icon for my executable, but how to do it for Mac?

Thanks,
Luigi

All you need to do is to mark the icon for export in .iml (just like in windows, but in windows you need to use .ico in rc too, but maybe you are using some other way in win32). Build process should take care of rest.

Hello Mirek,

I was not lucky or I missed something. See the picture attached.
I created the icon marking it to export. Added some other to export as seen in theide, but no icon is shown.
Any hint?

Thanks,
Luigi

Well, there one issue that you need to be aware of. Unfortunately MacOS is caching these things and does not provide a simple way how to clear the cache (I have spent a lot of time to find that before giving up). So it is possible that it has now cached old status (no icon).

Perhaps test by renaming the app or restart the Mac.

Mirek

Renaming the app, i.e. the package, for me was the only solution. The others failed.
Thanks,
Luigi

No prob.
I have read some guide how to do the same with Xcode and it is a nightmare. The U++ way
remain the best!

Thanks,
Luigi
