Subject: Button and WantFocus

Hi there,
I was trying to exclude a button from the tab sequence (i.e. when user hits tab, the focus should pass through all the Ctrls, but not to that button), but I noticed that in the interface designer there is not the option WantFocus (EditString and other Ctrl have it). I tried to explicitly set .WantFocus(false) (or .NoWantFocus): the code compiles, but still the button is in the tab sequence. Is this the intended behaviour?
Thanks,
gio
