Subject: Compiling app using theIde command line ? (linux)
Posted by Xemuth on Fri, 10 May 2019 19:30:27 GMT

Hello Community,

I have built TheIde on my raspberry Pi (Have follow this post) and I want to compile one of my code on it.
problem is, since I had only dev C++ on windows (GUI <3), I have no idea of how compile upp project using only command line.

I guess(According to this page) TheIde can be used to build project using Upp framework without having to give a huge gcc command.

If I'm guessing right, can you guys give me a simple example of how build reference/HttpServer ?

Thanks in advance

Have a good day !

You should use umk instead of TheIDE.
Example:
umk MyApps your_project GCC -bs
For reference/HttpServer
umk reference HttpServer GCC -bs
