Subject: MATLAB .mat files handling

Some weeks ago I realised that BEMRosetta required to handle MATLAB .mat files.

Then, a great colleague told me that an advantage of python in scientific computing is that they have link to those files just out of the box.

Well, now U++ has that advantage too.

Bazaar/plugin/matio includes a basic and simple to use C++ wrapper to matio library. Matio license is simplified BSD.
Bazaar/Matio_demo includes a demo to handle it.

Scientifics, engineers..., enjoy!

The code is changing fast. If somebody requires more features, just ask.
