## Subject: [SOLVED] PHP MD5 equivalent
Posted by forlano on Sun, 02 Jun 2019 18:04:54 GMT

Hello,

which is the U++ md5() function equivalent to the one of PHP?

MD5String() produces different string, while MD5Digest() is in Web (deprecated) and I cannot compile.

Any hint?
Thanks,
Luigi

I'm afraid I did some mistake.
The U++ md5() function works as expected. Instead the php program I was using did some not transparent conversion that i am trying to understand.
