Hello,

What about showing privates methods differently in Ctrl + Space window

Actual vision :

The idea :

As you can see, privats methods can be spotted by looking the red 'p' in the yellow circle
and protected method can be spotted by the green 'p' in the yellow circle

What you guys think about it ?

Thanks in advance
Best regard

I had trouble with spotting the difference ;)
IMO private methods should not be listed if they can't be called.

Yeah the p is really tiny

Quote:IMO private methods should not be listed if they can't be called.

Indeed seems logical but, personally, I like to see every method of the class, even if sometime it
let me use private methode where I can't :lol:
